

Implementation Packages

Work Management Australia has developed a methodology for the implementation of Project and Marketing Work Management solutions. It is a comprehensive, step-by-step approach that leads a project team from initial planning and strategy to implementation and go live. The interactive methodology allows organisations to build a foundation that is scalable and extendible.

Essentials Package
15 days
 Organisations new to Workfront often want to start small. The basic implementations allow for high user adoption of the application and sets the path for future evolution

Accelerator Package
20 days
 The Accelerator package is the most common option to provide businesses a head start on the workflows required. It provides ample workflows and dashboards and resource management to facilitate growth as the organisation matures

Optimised Package
34 days
 The Optimised package is for organisations where implementation is needed across multiple divisions or countries. The Accelerator option is used as a basis from which the same process is repeated for every division

Deliverables

People:

- Worker Experience - Personas, layouts, teams & companies
- Resource Management - Team and *Resource Scheduling
